

News release no. 11/2018

2018.11.16

Iceland Leading Indicator – Deteriorating growth outlook

The Iceland Composite Leading Indicator (CLI) dropped in October for the tenth consecutive month. The drop since January constitutes the largest continuous decline since 2007. These developments reflect increased uncertainty in the months ahead.

Four of the six CLI components drop on the previous month. The greatest impact is due to debit card turnover and consumer confidence. However, the number of tourist arrivals and fish catches rise on the month. Also, the long-term trend of some important CLI components remains strong. The main risk factors continue to include some external factors mainly in relation to the geopolitical situation.

Turning points of the CLI tend to precede turning points in economic activity relative to trend by approximately six months. Economic activity is measured by Gross Domestic Product published by the Statistical Bureau of Iceland. The calculation of Analytica's CLI is based on methodology adopted by the OECD.

Chart 1. GDP and Analytica's CLI – Trend Adjusted

Long term trend = 100

Chart 1 depicts Analytica's CLI together with trend adjusted GDP. The chart shows that the CLI leads GDP on average by around six months.

A gray triangle has been placed on Chart 1 for the month of March 2016 indicating a CLI turning point to the downside. A triangle is placed for July 2017 indicating a turning point to the upside for the trend adjusted GDP early this year. Lastly, a gray triangle has now been placed in January/February of this year indicating a turning point to the downside this fall/winter.

As seen in Chart 2 decent growth has been forecast into early 2018. The forecast is based on the Iceland CLI and its components after shifting forward by six months.

The purpose of Chart 2 is to put GDP in context with the leading indicator depicted on Chart 1. As seen in Chart 2 GDP grew sharply in Q2. The underlying long-term GDP growth trend remains strong.

Chart 2. GDP and Analytica's forecast into year 2019

ISK 000m per month - 2005 Prices

Note: GDP figures for 2015, 2016 and 2017 are preliminary estimates by the Statistical Bureau of Iceland.

The GDP figures presented in Chart 2 are based on the official quarterly estimates of the Statistical Bureau of Iceland. The quarterly GDP numbers have been distributed over individual months. The figures are seasonally adjusted and smoothed and are in amounts of thousands of million ISK at fixed 2005 prices.

There are six components of Analytica's CLI. These are: Fish catches, inflation adjusted debit card turnover, number of tourists visiting Iceland, the MSCI World equities index, inflation adjusted imports and the Gallup Index of Consumer Confidence. For the month of October, four of the six underlying components drop year on year. Also, four of the six components drop on the previous month. See Appendix, Charts A1 and A2.

Some revisions to the index values have taken place. This is a result of component revisions and in part a result of the methodology employed, including the long-term trend estimate.

Table 1 shows the development of the CLI during the past twelve months. The value for October drops to 98.2. This value serves as an indicator to economic activity six months into the future, i.e. April 2019. A value of 100 indicates GDP in line with its long-term trend.

Table 1. Analytica's CLI 2017-2018

	Index	Change in %		Indication for month
		on month	YOY	
2017				
October	102.0	0.7%	1.0%	April 2018
November	102.5	0.5%	1.8%	May
December	102.8	0.2%	2.4%	June
2018				
January	102.7	0.0%	2.7%	July
February	102.4	-0.3%	2.3%	August
March	102.1	-0.4%	1.8%	Sept.
April	101.6	-0.5%	1.4%	Oct.
May	100.9	-0.6%	1.0%	Nov.
June	100.3	-0.6%	0.5%	Dec.
July	99.7	-0.6%	-0.2%	Jan. 2019
August	99.1	-0.6%	-1.3%	Feb.
September	98.6	-0.5%	-2.7%	March
October	98.2	-0.4%	-3.8%	April

The November Composite Leading Indicator is scheduled for release on December 17, 2018.
