

News release no. 3/2019

2019.03.19

### Iceland Leading Indicator – Increased uncertainty

The Iceland Composite Leading Indicator (CLI) dropped in February for the thirteenth consecutive month. The 12 months decline is the largest since 2008. These developments signal slower growth or stagnation ahead as well as increased uncertainty.

Four out of six CLI components drop on the previous month. The greatest impact is due to tourist arrivals and debit card turnover. The long-term trend of some important CLI components remains strong. However, there is considerable uncertainty regarding developments in the tourism industry and concerning wage negotiations. There also remain some external risk factors mainly in relation to the geopolitical situation.

Turning points of the CLI tend to precede turning points in economic activity relative to trend by approximately six months. Economic activity is measured by Gross Domestic Product published by the Statistical Bureau of Iceland. The calculation of Analytica's CLI is based on methodology adopted by the OECD.

#### Chart 1. GDP and Analytica's CLI – Trend Adjusted

Long term trend = 100

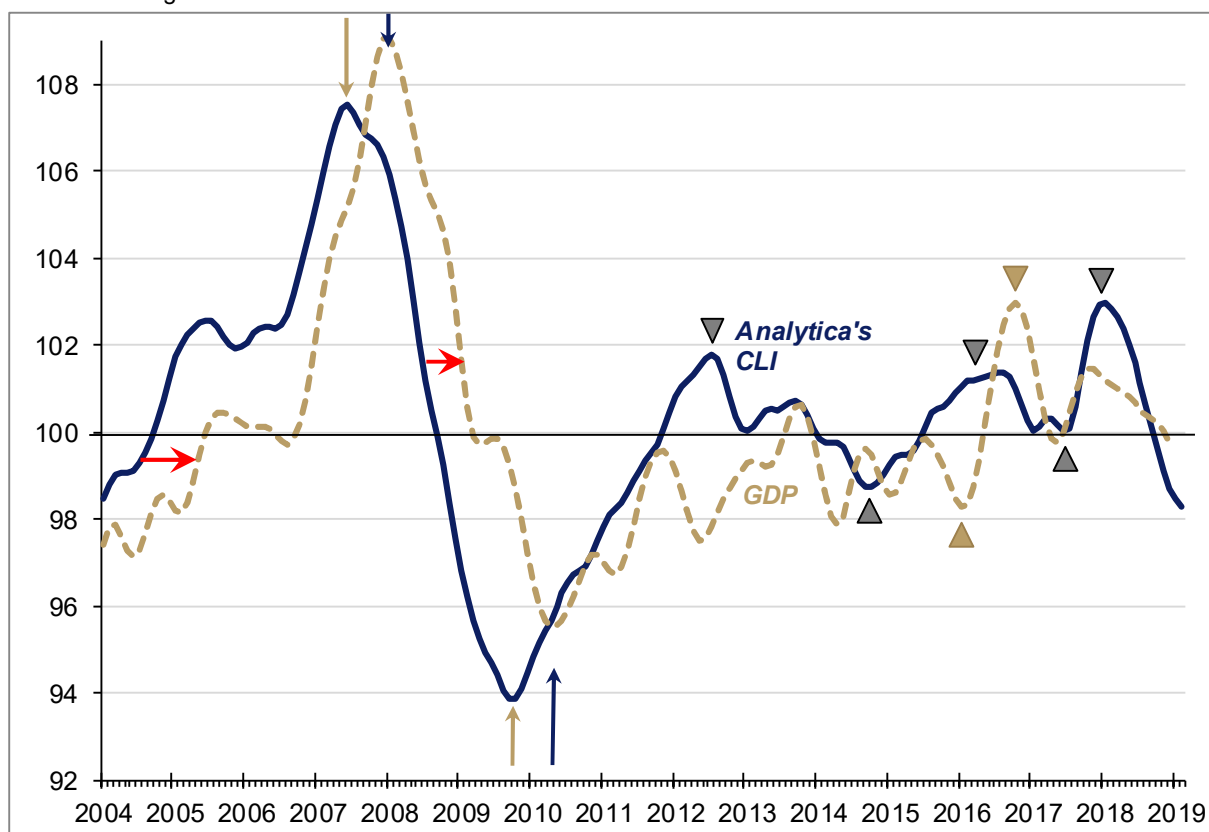

Chart 1 depicts Analytica's CLI together with trend adjusted GDP. The chart shows that the CLI leads GDP on average by around six months.

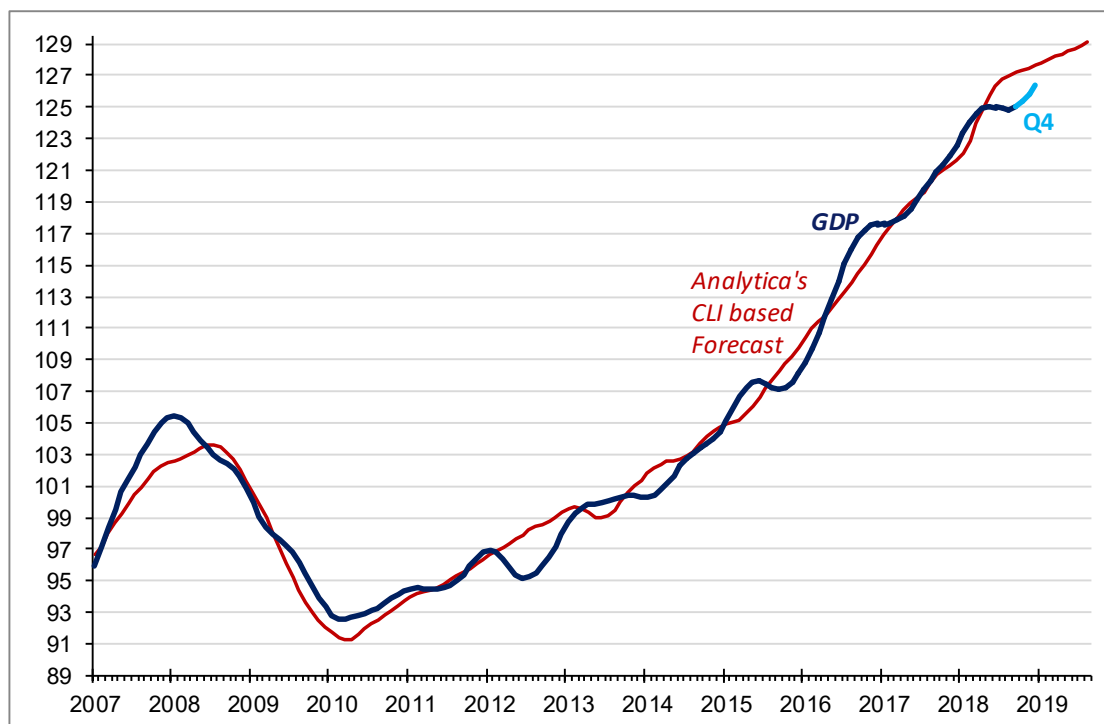

A gray triangle has been placed on Chart 1 for the month of March 2016 indicating a CLI turning point to the downside. A triangle is placed for July 2017 indicating a turning point to the upside for the trend adjusted GDP early 2018. Lastly, a gray triangle has now been placed in January/February of 2018 indicating a turning point to the downside this winter.

As seen in Chart 2 decent growth had been forecast into early 2018 with slower growth in the latter half of 2018 and early 2019. The forecast is based on the Iceland CLI and its components after shifting forward by six months.

The purpose of Chart 2 is to put GDP in context with the leading indicator depicted on Chart 1. As seen in Chart 2 GDP grew sharply in Q2. The underlying long-term GDP growth trend remains strong.

### Chart 2. GDP and Analytica's forecast into year 2019

ISK 000m per month - 2005 Prices

Note: GDP figures for 2016, 2017 and 2018 are preliminary estimates by the Statistical Bureau of Iceland.

The GDP figures presented in Chart 2 are based on the official quarterly estimates of the Statistical Bureau of Iceland. The quarterly GDP numbers have been distributed over individual months. The figures are seasonally adjusted and smoothed by Analytica and are in amounts of thousands of million ISK at fixed 2005 prices. Analytica's seasonal adjustment provides a slightly different result than the adjustment performed by the Statistical Bureau.

There are six components of Analytica's CLI. These are: Fish catches, inflation adjusted debit card turnover, number of tourists visiting Iceland, the MSCI World equities index, inflation adjusted imports and the Gallup Index of Consumer Confidence. For the month of February, all six underlying components drop year on year. However, four out of six components drop on the previous month. See Appendix, Charts A1 and A2.

Some revisions to the index values have taken place. This is a result of component revisions and in part a result of the methodology employed, including the long-term trend estimate.

Table 1 shows the development of the CLI during the past twelve months. The value for February drops to 98.3. This value serves as an indicator to economic activity six months into the future, i.e. August 2019. A value of 100 indicates GDP in line with its long-term trend.

**Table 1. Analytica's CLI 2018-2019**

	<u>Index</u>	<u>Change in %</u>		<u>Indication for month</u>
		<u>on month</u>	<u>YOY</u>	
<b>2018</b>				
February	102.9	-0.1%	2.7%	August 2018
March	102.7	-0.2%	2.3%	Sept.
April	102.4	-0.3%	2.1%	Oct.
May	102.0	-0.4%	1.8%	Nov.
June	101.6	-0.4%	1.5%	Dec.
July	101.1	-0.4%	1.0%	Jan. 2019
August	100.6	-0.5%	0.0%	Feb.
September	100.1	-0.5%	-1.3%	March
October	99.6	-0.5%	-2.4%	April
November	99.1	-0.5%	-3.4%	May
December	98.7	-0.4%	-4.1%	June
<b>2019</b>				
January	98.5	-0.2%	-4.4%	July
February	98.3	-0.2%	-4.4%	August

The March Composite Leading Indicator is scheduled for release on April 18, 2019.
