

### Iceland Leading Indicator – Growth at long-term trend

The Iceland Composite Leading Indicator (CLI) remained unchanged in October. However, the values for the past few months were revised downwards. At the revised values the CLI has remained approximately unchanged all year 2022. The most straight forward interpretation is for GDP growth to continue in line with long-term trend for the first half of 2023. However, GDP appears to be above long-term capacity.

Three out of six CLI components fall on the previous month. The largest contributions are due to a fall in fish catches, a contraction in domestic debit card turnover and the fall in stock prices. However, the developments in the tourism industry still seem positive. The War in Ukraine is a source of considerable uncertainty. The developments in financial markets are also a risk factor in view of rising inflation and monetary tightening of various central banks.

Turning points of the CLI tend to precede turning points in economic activity relative to trend by approximately six months. Economic activity in terms of GDP is measured by Statistics Iceland. The calculation of Analytica’s CLI is based on methodology adopted by the OECD.

**Chart 1. GDP and Analytica’s CLI – Trend Adjusted**

Long term trend = 100

Chart 1 depicts Analytica’s CLI together with trend adjusted GDP. The chart shows that the CLI leads GDP on average by around six months.

Chart 2 depicts the developments of the Gallup index of Consumer Confidence seasonally adjusted and smoothed for the period 2007-2022. This is one of the CLI components and empirically it provides an early indication of the business cycle.

The dark blue curve in chart 2 shows the deviation of the Consumer Confidence index from the long-term trend whereas the brown curve depicts the index year on year change. The index has fallen year on year as well as for the past few months. This indicates diminishing public optimism. However, the latest developments indicate a potential shift in this regard even though it is currently too early to draw firm conclusions.

**Chart 2. The Gallup Index of Consumer Confidence – Deviation from long term trend and YoY %-change**  
Seasonally adjusted and smoothed

The same curves as shown in chart 2 are depicted in the Appendix charts A1 and A2. The purpose of chart 2 is to highlight developments of the index.

There are six components of Analytica’s CLI. These are: Fish catches, inflation adjusted debit card turnover, number of tourists visiting Iceland, the MSCI World equities index, inflation adjusted imports and the Gallup Index of Consumer Confidence. For the month of September, three out of six underlying components rise year on year. Also, three out of six components rise on the previous month. See Appendix, Charts A1 and A2.<sup>1</sup>

Some revisions to the CLI values have taken place. This is a result of component revisions and in part a result of the methodology employed, including the long-term trend estimate.

<sup>1</sup> The series in chart A2 are now shown in a standardized form, i.e. all series adjusted for mean=0, standard deviation=1.

Table 1 shows the development of the CLI during the past twelve months. The index for October is unchanged on the month and takes the value of 102.y. This serves as an indicator to economic activity six months into the future, i.e. April 2023. A value of 100 indicates GDP in line with its long-term trend.

**Table 1. Analytica's CLI 2021-2022**

	Index	Change in %		Indication for month
		on month	YOY	
<b>2021</b>				
October	101.2	0.7%	7.3%	April 2022
November	101.8	0.7%	7.6%	May
December	102.4	0.6%	7.5%	June
<b>2022</b>				
January	102.7	0.3%	7.1%	July
February	102.8	0.1%	6.6%	August
March	102.7	-0.1%	6.0%	Sept.
April	102.5	-0.1%	5.4%	Oct.
May	102.5	-0.1%	4.7%	Nov.
June	102.5	0.0%	4.1%	Dec.
July	102.6	0.1%	3.5%	Jan. 2023
August	102.6	0.0%	2.8%	Feb.
September	102.7	0.1%	2.2%	March
October	102.7	0.1%	1.5%	April

The November Composite Leading Indicator is scheduled for release on December 16, 2022.
